	/Young Lee/ Primary Examiner, Art U	nit 2482	

Continuation of 11. does NOT place the application in condition for allowance because: Applicant arguments are not persuasive. Applicant argued that Niikura merely describes change of adjacent I pictures, and does not disclose a color temperature estimation section to estimate a color temperature of the compressed video image. The Examiner respectfully disagrees. Niikura fig. 15 clearly discloses a color temperature estimation section to estimate a color temperature of the compressed video image (see the color temperature estimation section estimating the hue change in picture sequence 86 to picture 88 in fig. 15). Applicant also argued that Niikura hue is different from "color temperature" because according to paragraph [0003] of the Description of the Related Art section of the present application, "The color temperature of a video image is defined as the value at which the chromaticity coordinates of the video image match those of a light source.". Applicant argument is noted. However, the Examiner used the color temperature is equivalent to "hue or RGB" as disclosed in paragraph [0007] of the Description of the Related Art section of the present application. Due to the discrepancies, it is recommended that the claim be amended to clearly define what color temperature is. Applicant also argued that Niikura is not directed at estimating color temperature because Niikura is directed towards detecting shot boundaries. The Examiner respectfully disagrees. Niikura shows shot boundaries but the overall scheme is estimating color temperature change from an initial hue 86 to a new hue 88 in fig. 15, and the claim calls for a color temperature estimation section to estimate a color temperature of the compressed video image (see the color temperature estimation section estimation section to estimate a color temperature of the compressed video image (see the color temperature estimation section estimation section section to estimate a color temperature of the compressed video image (see the color temperature estimation
